INTRODUCTION

Congratulations on your purchase of the Content Management System for the Hi-Def Digital Signage Media Player. Your complete satisfaction is very important to us.

Gefen

Gefen delivers innovative, progressive computer and electronics add-on solutions that harness integration, extension, distribution and conversion technologies. Gefen's reliable plug-and-play products, supplement cross-platform computer systems, professional audio/video environments, and HDTV systems of all sizes with hard-working solutions that are easy to implement and simple to operate.

The Gefen Content Management System

The Content Management System (CMS) is a software application developed for the Hi-Def Digital Signage Media Player to simplify the implementation and the daily management of Digital Signage content and scheduling.

From hospitality to advertising, education and business communications, the Content Management System provides users a simple and general purpose interface to manage content on a single Hi-Def Digital Signage Media Player on a network.

OPERATION NOTES

READ THESE NOTES BEFORE INSTALLING OR OPERATING THE CONTENT MANAGEMENT SOFTWARE

- This Content Management System is designed to manage multiple Hi-Def Digital Signage Media Players on a network.
- This product requires that VMWare Player be installed, before using the CMS.
- A USB device must be connected to the Hi-Def Digital Signage Media Player at all times, while using the CMS.
- The Content Management System supports Windows 7® and Windows XP®. Both 32-bit and 64-bit versions of these operating systems are supported.

FEATURES

Features

- Manage multiple Hi-Def Digital Signage Media Players in Pull Mode
- Create / edit playlists and schedules
- Manage media content
- Create groups to manage multiple boxes.

Package Includes

- (1) Content Management Software
- (1) User Manual

PREPARING YOUR COMPUTER

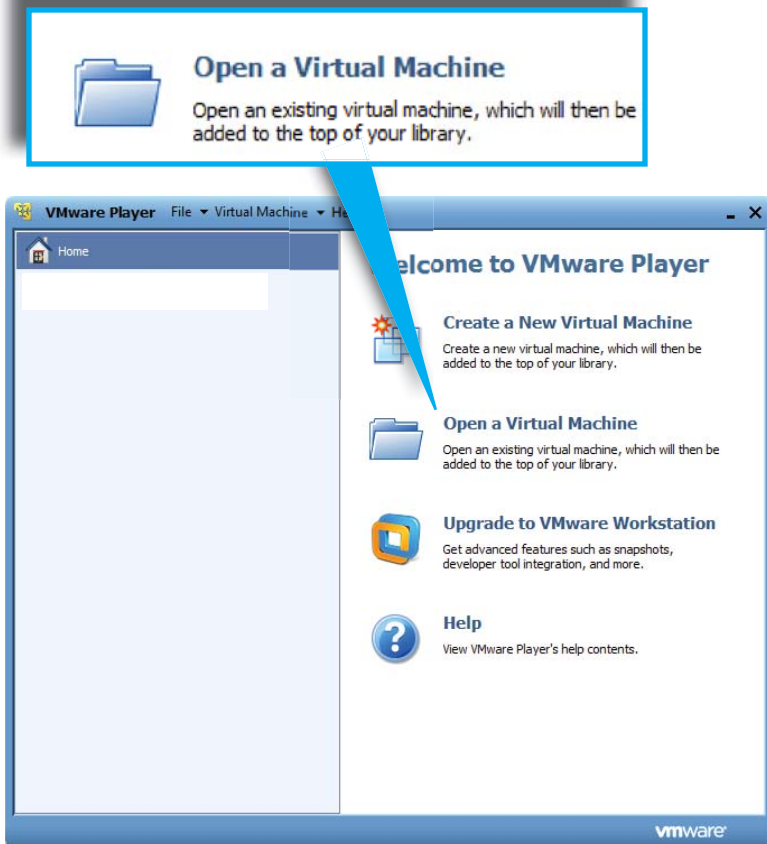

Installing VMWare® Player

In order to use the CMS with the Hi-Def Digital Signage Media Players on your network, you must install VMWare® Player. Go to <http://www.vmware.com> to download and install VMWare® Player. Follow the instructions provided by the installation wizard.

Starting the CMS

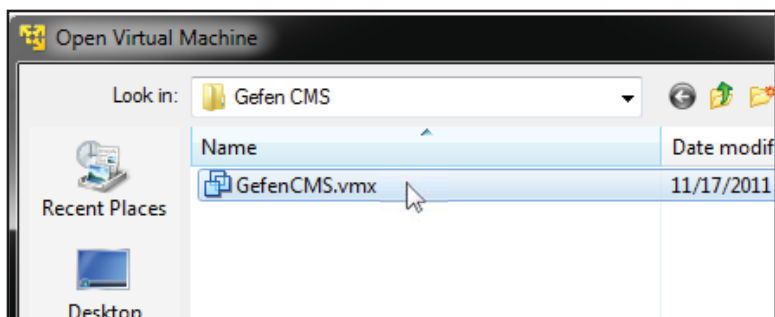

To use the CMS, you must first use the VMWare® Player to open a virtual machine. The virtual machine file can be identified by the *.vmx extension.

1. Launch VMWare Player by selecting *Start > Programs > VMWare > VMWare Player* or double-clicking on the icon located on the Windows® desktop.
2. Once the following screen is displayed, click on Open a Virtual Machine.

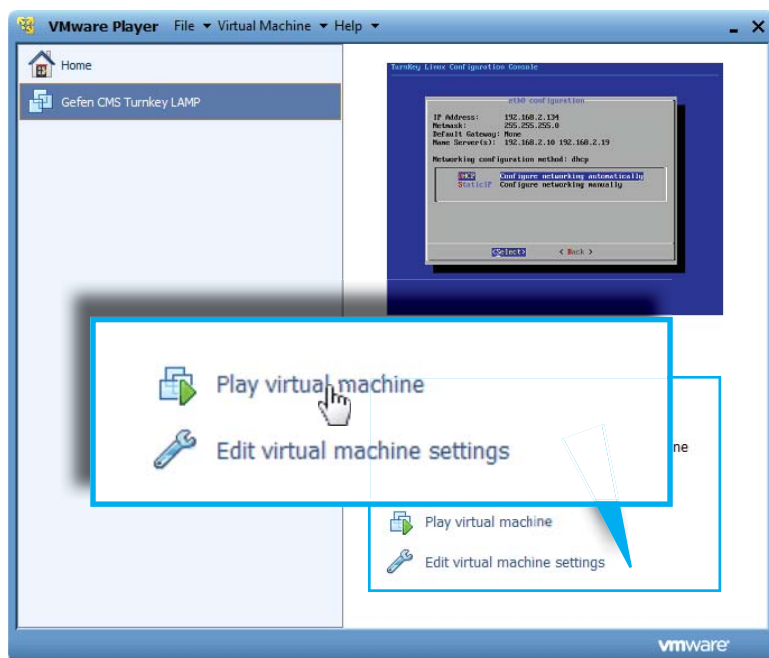

STARTING THE CMS

3. In the Open Virtual Machine dialog box, select the GefenCMS.vmx file and then click the Open button on the dialog box to load the file.

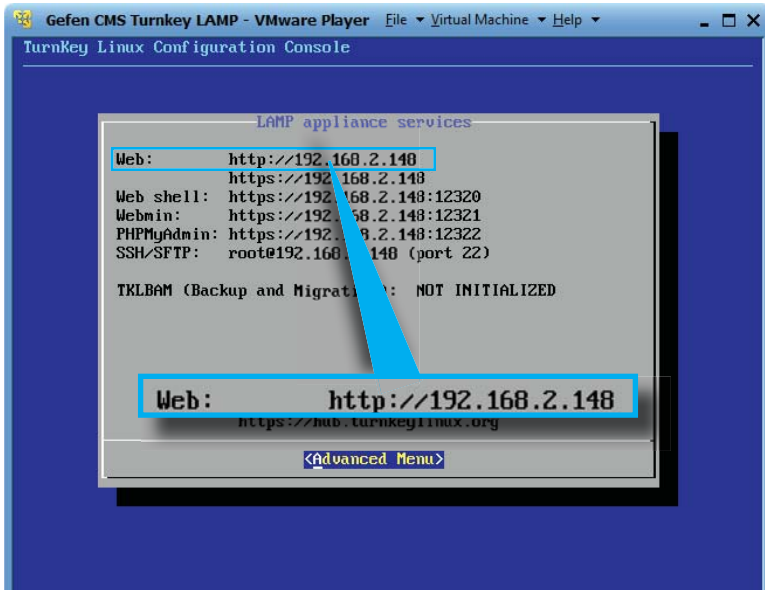

4. After the GefenCMS.vmx file has been loaded, click *Play virtual machine*.

STARTING THE CMS

5. After a few moments, the Configuration Console will be displayed, as shown below.

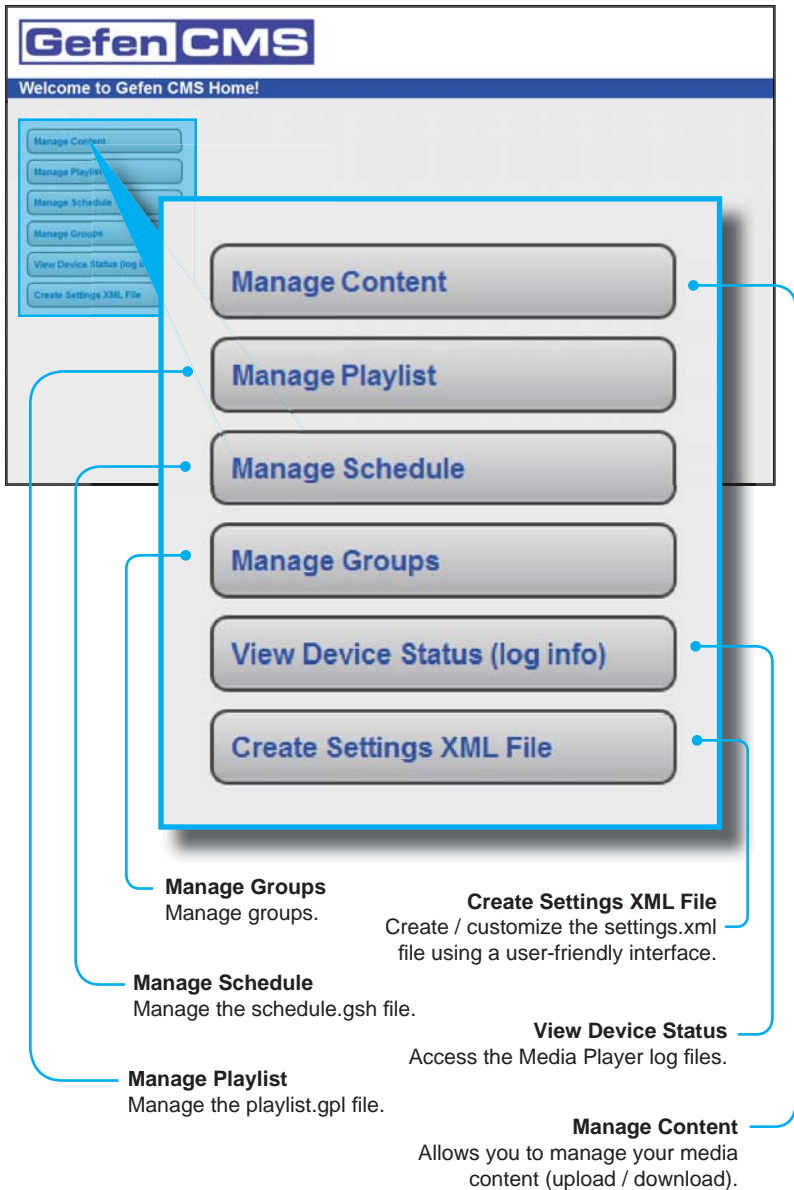

6. Open your Web browser and type in the IP address displayed on this screen. The IP address listed in the Configuration Console is the *default* IP address and can be changed based on the network requirements.

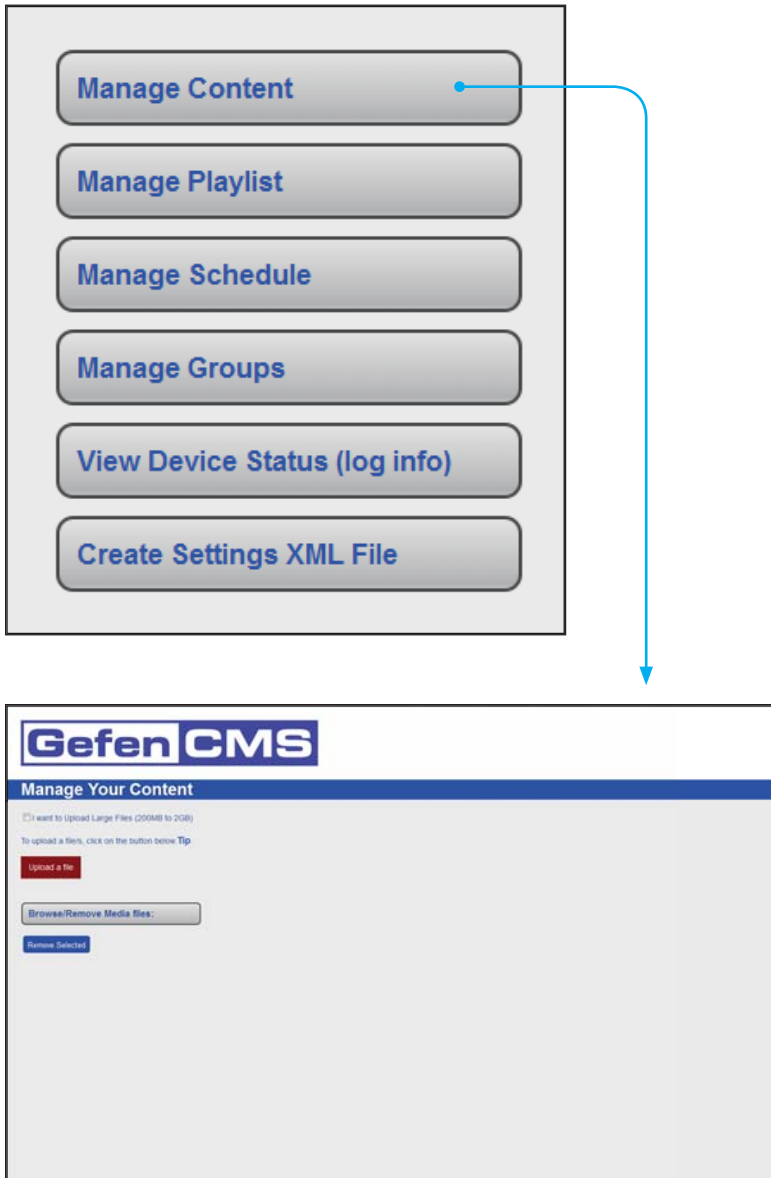

CMS Home

The CMS Home page provides the starting point for every project. Each of the six (6) buttons on the CMS Home page manages a separate stage and are ordered in the way each step should be completed.

Managing the Content

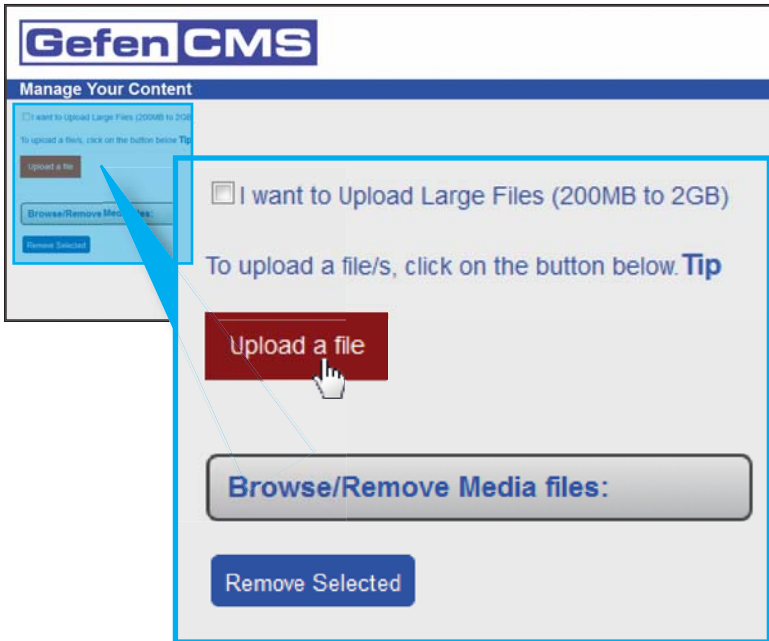

1. Click on the *Manage Content* button to display the *Manage Your Content* page.

2. Click on *Upload a file*.

Upload Large Files

Uploading large files may cause a time-out or other errors. Check this box when uploading larger files. Only one file can be uploaded at a time.

3. Select the desired media file in the selection dialog and then click Open.

NOTE: The Gefen CMS supports drag-and-drop plus multiple file selection on both Mozilla Firefox® and Google Chrome™ browsers. It is recommended to use the latest version of either browser.

Once the upload begins, the Gefen CMS will display the upload progress. You can click the Cancel button at any time to abort the upload process.

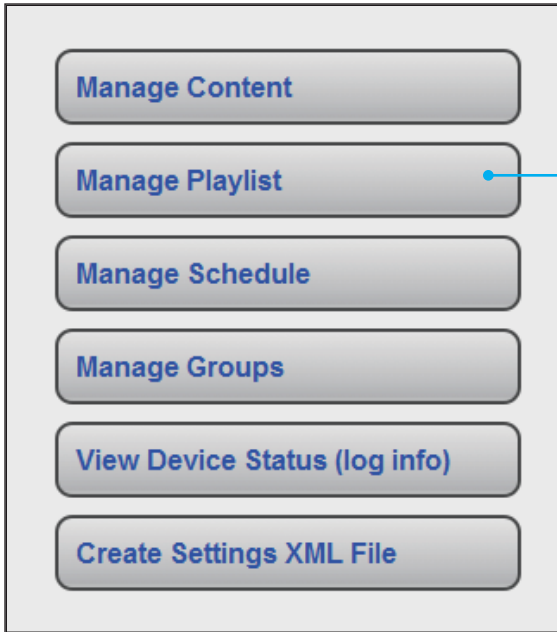

If the upload is successful, the file will be displayed under *Browse / Remove Media files*.

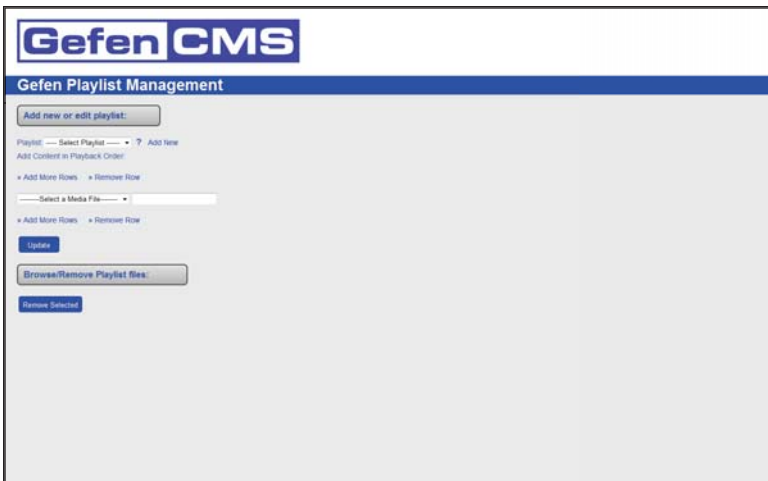

To remove files, place a check box next to the file you want to delete. Then, click the *Remove Selected* button.

Managing the Playlist

1. Click on the *Manage Playlist* button.

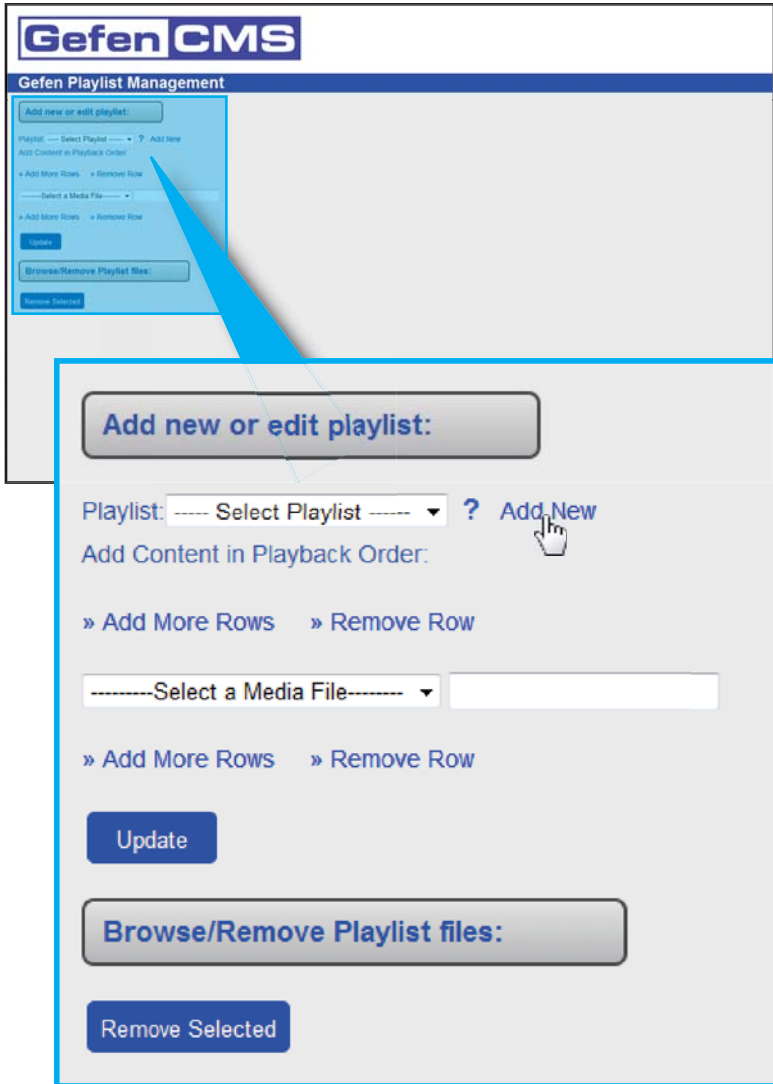

The *Gefen Playlist Management* page will be displayed:

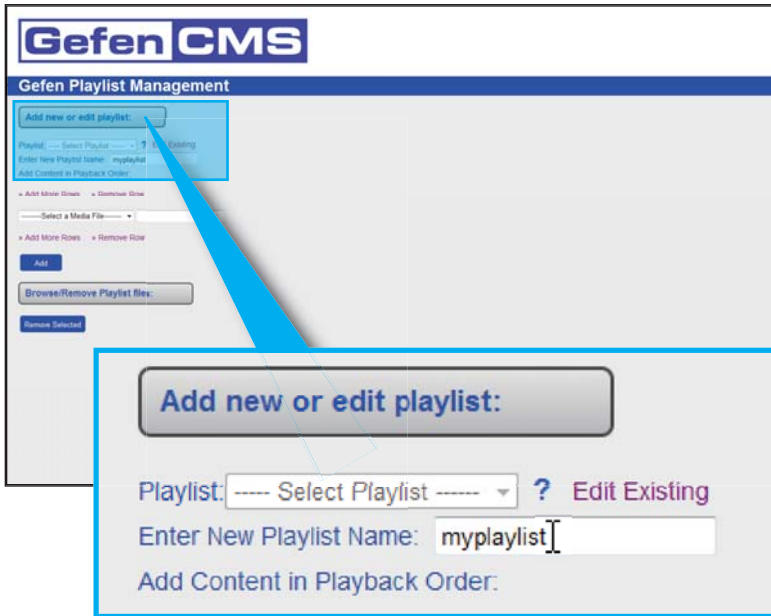

Currently, we don't have any playlists. Any existing playlists would be listed in the Playlist drop-down list.

2. Create a new playlist by clicking the *Add New* link.

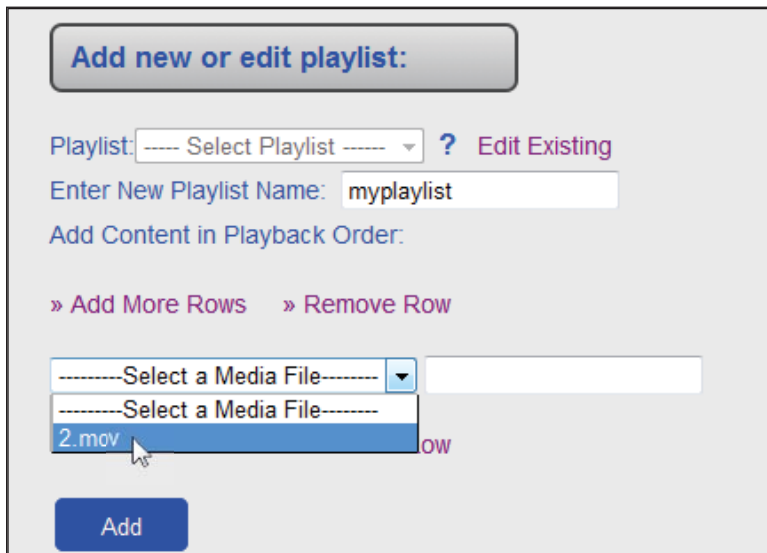

3. Provide a name for the playlist. For this tutorial, you can use the name "myplaylist".

The screenshot shows the 'Gefen CMS' interface with a 'Gefen Playlist Management' section. A blue callout box highlights the 'Add new or edit playlist:' form. The form includes a dropdown menu for 'Playlist' (set to '---- Select Playlist ----'), a link '? Edit Existing', a text input for 'Enter New Playlist Name' (containing 'myplaylist'), and a section for 'Add Content in Playback Order' with links '» Add More Rows' and '» Remove Row'. Below these are buttons for 'Browse/Remove Playlist files' and 'Remove Selected'.

4. Since we have already uploaded some media content (2.mov), click the Select a Media File pull-down list to select the content.

This is a detailed view of the 'Add new or edit playlist:' form. It features a dropdown menu for 'Select a Media File' with '2.mov' selected. Below the dropdown is a text input field. The form also includes an 'Add' button and links for '» Add More Rows' and '» Remove Row'.

The illustration below shows that the media file `2.mov` has been selected for our playlist.

5. If you have additional media content to add to the playlist, you will need to click the *Add More Rows* link. Each media file must have its own row. Use the *Remove Row* link to delete a row.

Add new or edit playlist:

Playlist: ----- Select Playlist ----- ? [Edit Existing](#)

Enter New Playlist Name:

Add Content in Playback Order:

[» Add More Rows](#) [» Remove Row](#)

2.mov

[» Add More Rows](#) [» Remove Row](#)

Add

6. To upload the playlist, click the Add button.

ADVANCED: By adding the media file to our playlist, our file (`myplaylist.gpl`) would look like this:

```
<media>
  <FileName>2.mov</FileName>
</media>
```

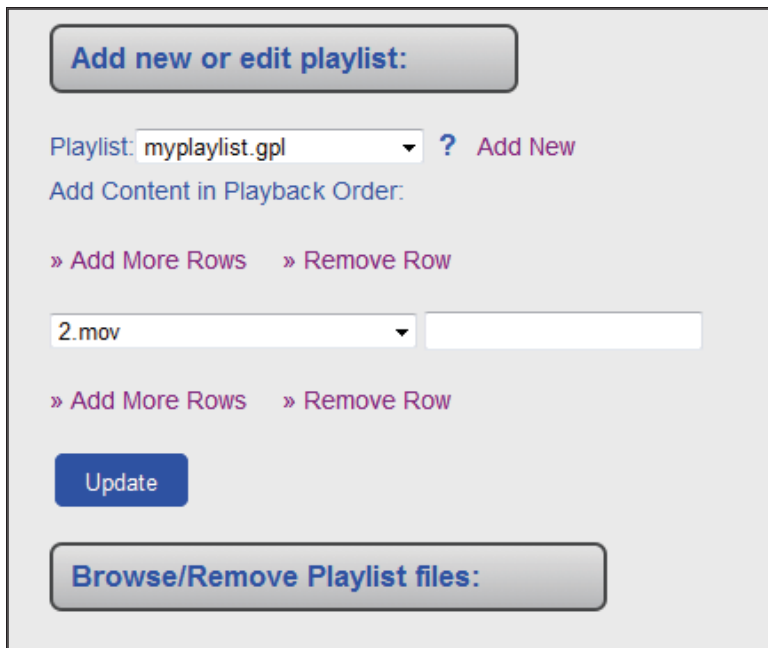

Using *Add More Rows* (plus adding more content) would result in adding additional media events to the playlist file, such as:

```
<media>
  <FileName>3.mov</FileName>
</media>

<media>
  <FileName>big.mov</FileName>
</media>
```

Pressing *Remove Row* would delete the selected media from the playlist.

7. After the playlist has been successfully added, the Add button will change to an Update button. The current playlist is now also visible from the Playlist pull-down list.

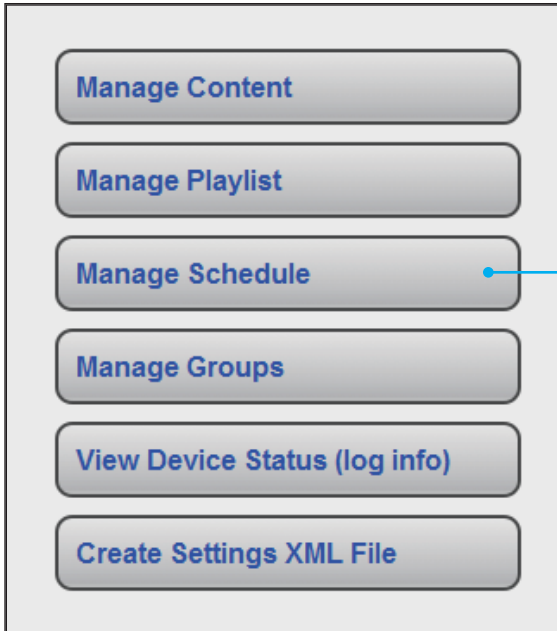

The screenshot displays a web interface for managing playlists. At the top, there is a button labeled "Add new or edit playlist:". Below this, a "Playlist:" dropdown menu is set to "myplaylist.gpl", followed by a question mark icon and a purple "Add New" link. Underneath, the text "Add Content in Playback Order:" is shown. There are two rows of content management options, each with a purple "» Add More Rows" link and a purple "» Remove Row" link. The first row features a dropdown menu with "2.mov" selected and an adjacent empty text input field. The second row is identical but without the text input field. A blue "Update" button is positioned below the second row. At the bottom, there is a button labeled "Browse/Remove Playlist files:".

8. If you want to add more content to the currently selected playlist, make sure that you press the Update button.

Managing the Schedule

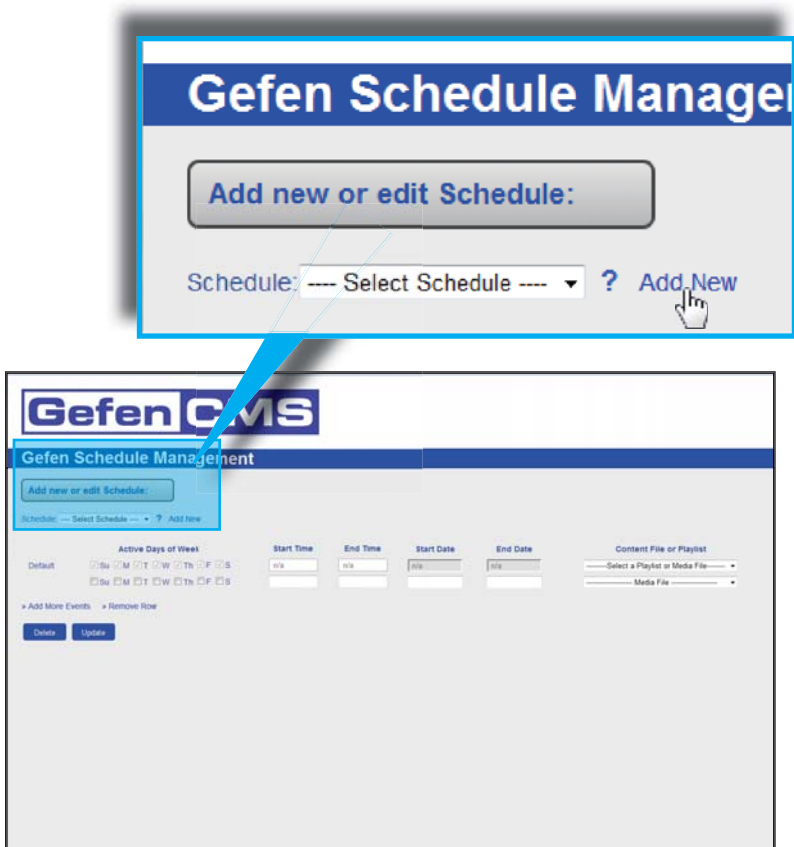

1. Click on the *Manage Schedule* button. This is where you assign a playlist or media content to be played in a given day, time, and period.

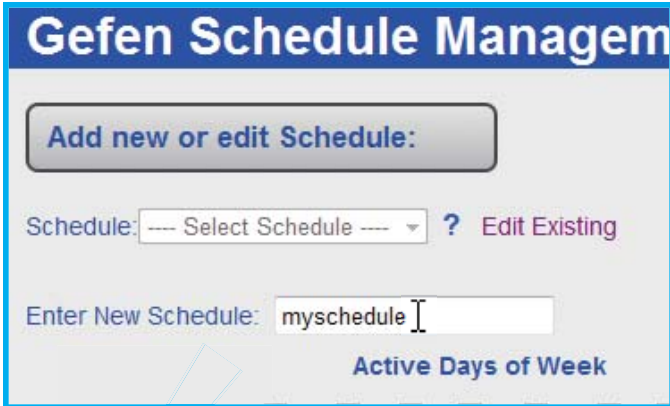

The *Gefen Schedule Management* page will be displayed:

2. Since we don't have a schedule yet, we need to create one. Click the *Add New* link under *Add new or edit Schedule*:

3. After clicking the Add New link, enter the name of the schedule file in the provided box. In the example below, we've used the name "myschedule".

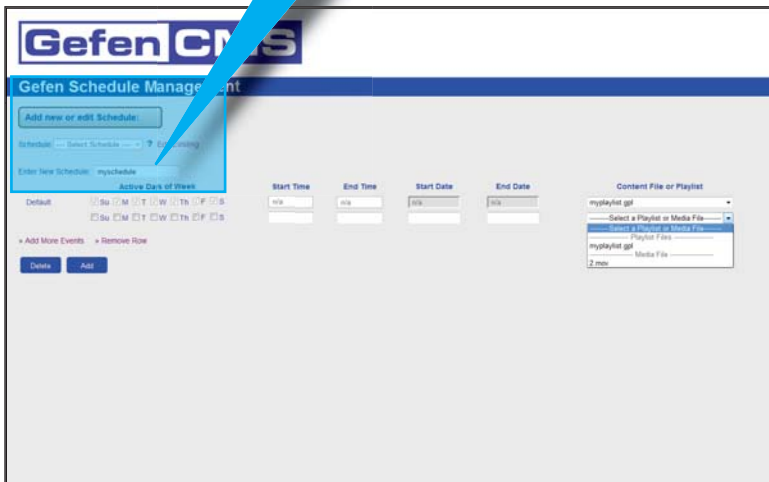

Gefen Schedule Management

Add new or edit Schedule:

Schedule: --- Select Schedule --- ? [Edit Existing](#)

Enter New Schedule:

Active Days of Week

Gefen CMS

Gefen Schedule Management

Add new or edit Schedule:

☐ Su ☐ M ☐ T ☐ W ☐ Th ☐ F ☐ S

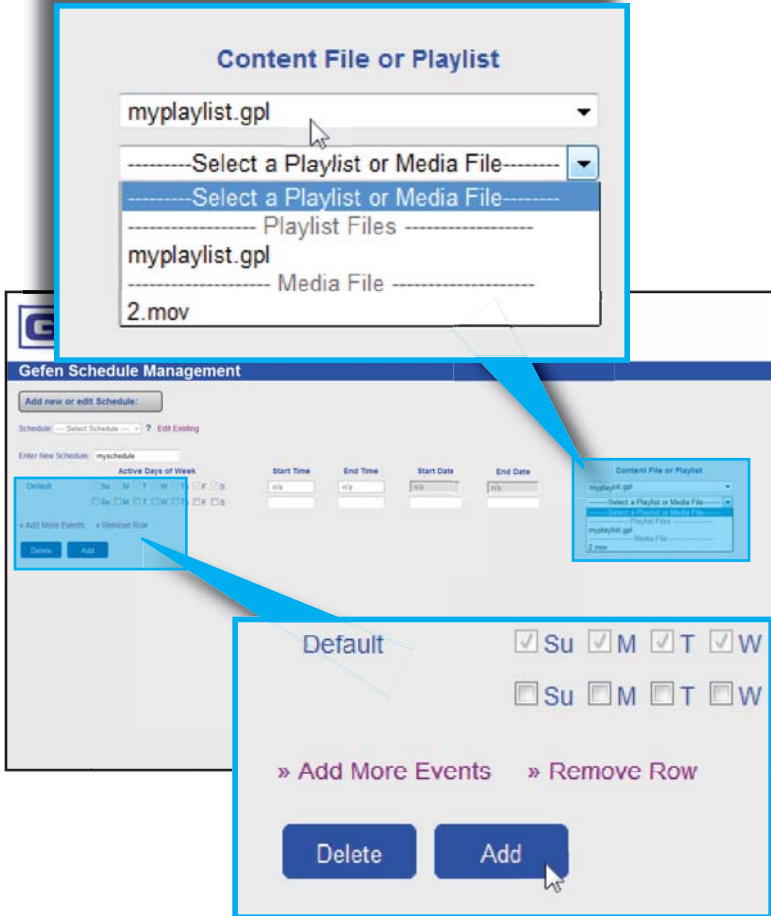

+ Add More Events + Remove Row

Start Time	End Time	Start Date	End Date
<input type="text" value="00:00"/>	<input type="text" value="00:00"/>	<input type="text" value="00/00/00"/>	<input type="text" value="00/00/00"/>

Content File or Playlist

Select a Playlist or Media File

- Next, select the playlist (or Media File) to be placed in the schedule file. As mentioned earlier, the schedule file can accommodate both Media Files and Playlist Files. For this example, select the Playlist (myplaylist.gpl) from the top pull-down list, as shown below:

- Click the *Add* button to upload the Schedule File (myschedule.gsh).

- Finally, select the day(s) and time(s) that you want the content to be played back.

We're going to start with selecting the days when we want the content to be played back. In this example, we're going to select Mondays, Tuesdays, and Thursdays. Click the mouse to place a check mark next to the days of the week you want. Click the mouse again to remove the check mark and unselect the day(s).

» Add More Events » Remove Row

Start Time: End Time: Start Date: End Date:

Content File or Playlist

myplaylist.gst

Select a Playlist or Media File

myplaylist.gst

2 min

NOTE: The top row of days cannot be changed. By default, if you do not select any days of the week, the content will be played every day of the week (Sunday - Saturday).

- Next, select the Start Time and End Time. As before, with selecting the days, if a Start Time and End Time are not entered, then the content will play all day long (12:00:00 - 23:59:59).

For this example, we're going to have the content play from 8:00 am in the morning until 5:00 pm in the evening.

NOTE: The Content Management System (CMS) only recognizes a 24-hour clock. All Start Times and End Times must be entered as such.

The screenshot shows the 'Gefen CMS' interface for 'Gefen Schedule Management'. A callout box highlights the 'Start Time' and 'End Time' input fields. The 'Start Time' field displays '08:00:00' and the 'End Time' field displays '5:00:00'. The main interface includes a header 'Gefen CMS', a sub-header 'Gefen Schedule Management', and a form with fields for 'Schedule', 'Active Days of Week', 'Start Time', 'End Time', 'Start Date', 'End Date', and 'Content File or Playlist'. The 'Start Time' and 'End Time' fields are highlighted with a blue box and a callout arrow pointing to the 'Start Time' field.

When entering the Start Time and End Time, the full time must be entered as HH:MM:SS. Each field will automatically display (as shown above) the correct format while the time values are entered. If the time value is incomplete (e.g. seconds are not entered), after proceeding to the next field, the time field will be erased and you will need to re-enter the data.

7. Finally, we need to set the Start Date and End Date. Although we have already set the days of the week, the Start Date and End Date end allow you to repeat the currently scheduled days for as many weeks as desired.
8. Clicking the Start Date field will display a calendar widget. Select the desired day by clicking on it. The Start Date field will now display the selected date.
9. Perform the same procedure for the End Date.

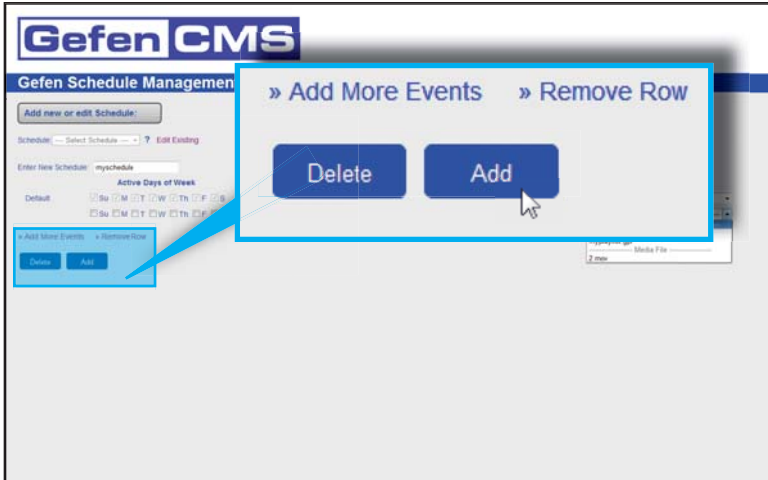

In the example below, we selected December 12, 2011 for the Start Date and December 23, 2011 for the End Date.

The current date will outlined in yellow.

The screenshot shows a CMS interface with three main sections: Start Date, End Date, and Content. The Start Date field is set to 12/12/2011. The End Date field is empty. A calendar widget for December 2011 is displayed over the End Date field. The calendar shows the current date (December 23, 2011) outlined in yellow. A blue arrow points from the text 'The current date will outlined in yellow.' to the yellow outline.

Su	Mo	Tu	We	Th	Fr	Sa
				1	2	3
4	5	6	7	8	9	10
11	12	13	14	15	16	17
18	19	20	21	22	23	24
25	26	27	28	29	30	31

- If you want to add additional events to the schedule file, click the *Add More Events* link. Each event has its own row. Use the *Remove Row* link to delete the current event from the schedule file.

- Click the *Add* button to add the schedule file. Click the *Delete* button to delete the currently selected schedule file.
- After the schedule file has been successfully added, the *Add* button will change to an *Update* button. To make changes to the currently selected schedule (located in the Schedule pull-down list), click the *Update* button.

ADVANCED: When using the *Add More Events* link, the schedule file is updated with a new event, as illustrated below:

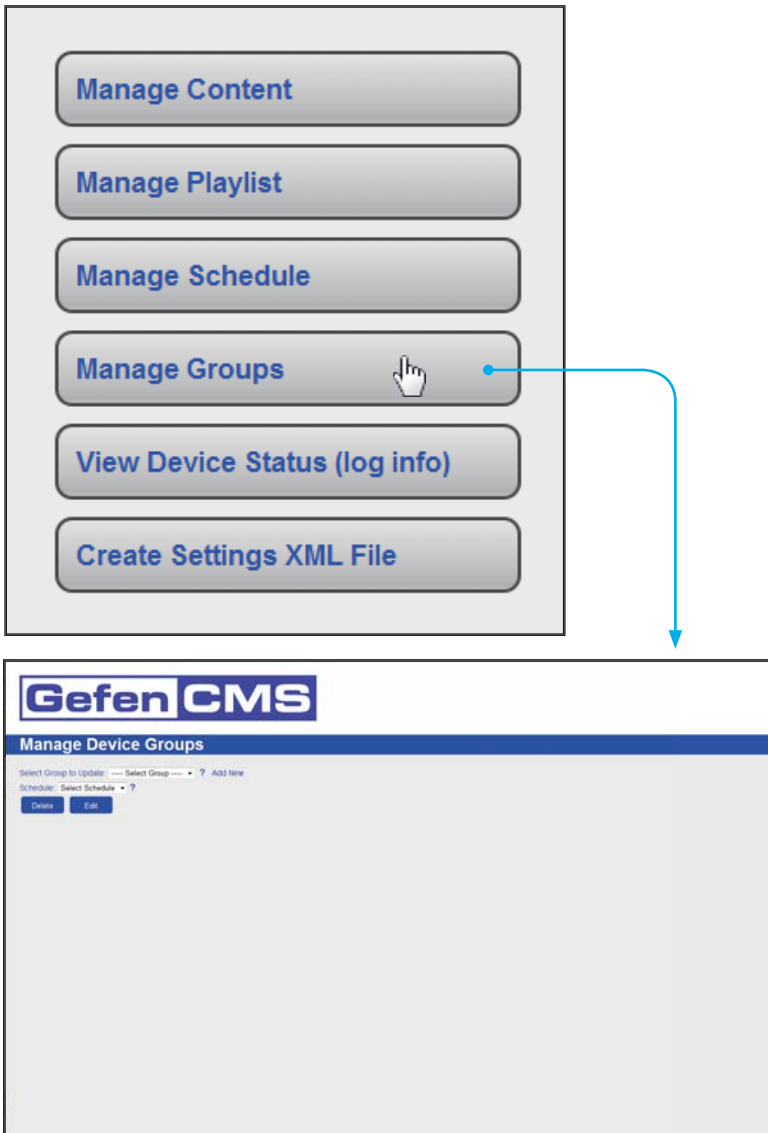

```
<Event>
  <StartDate>12/12/2011</StartDate>
  <EndDate>12/23/2011</EndDate>
  <DayOfWeek>0,1,1,0,1,0,0</DayOfWeek>
  <EventStart>08:00:00</EventStart>
  <EventEnd>17:00:00</EventEnd>
  <FileName>/playlists/myplaylist.gpl</FileName>
</Event>
```

Pressing *Remove Row* would delete the current event from the schedule file.

Managing Device Groups

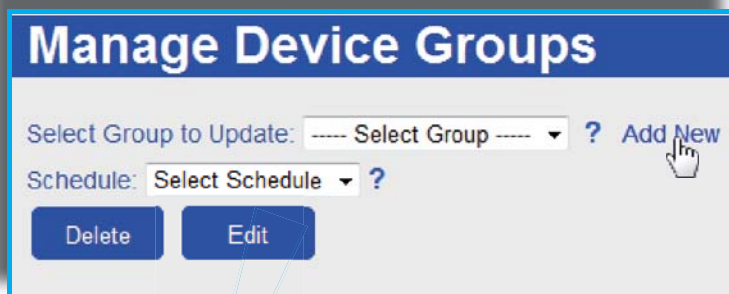

Using the Manage Device Groups page allows you to manage multiple Hi-Def Digital Signage Media Players on a network. This is the main purpose of the CMS.

1. Click on the *Manage Groups* button to display the *Manage Device Groups* page.

2. Since no groups have been created yet, click the Add New link to create a group.

If a group exists, it can be selected from the *Select Group to Update* pull-down list.

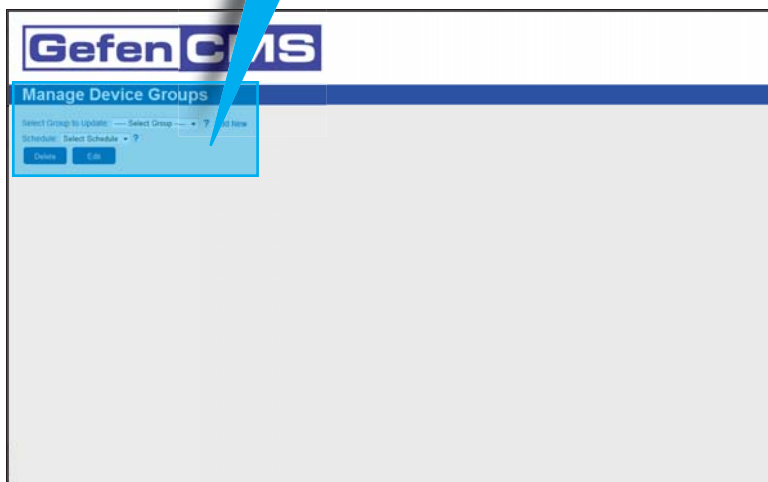

Manage Device Groups

Select Group to Update: ----- Select Group ----- ? [Add New](#)

Schedule: Select Schedule ?

[Delete](#) [Edit](#)

This is a close-up of the 'Manage Device Groups' form. It features a blue header with the title 'Manage Device Groups'. Below the header, there is a section for selecting a group to update, with a dropdown menu labeled '----- Select Group -----' and a question mark icon. To the right of this is a link 'Add New' with a mouse cursor icon pointing to it. Below this is a 'Schedule' section with a dropdown menu labeled 'Select Schedule' and a question mark icon. At the bottom, there are two blue buttons: 'Delete' and 'Edit'.

Once the group is created, the group name will appear in the Select Group to Update pull-down list.

4. Use the edit button to upload the associated files (schedule file, playlist file, and content) to the current group.

Use the Delete button to remove the group.

Manage Device Groups

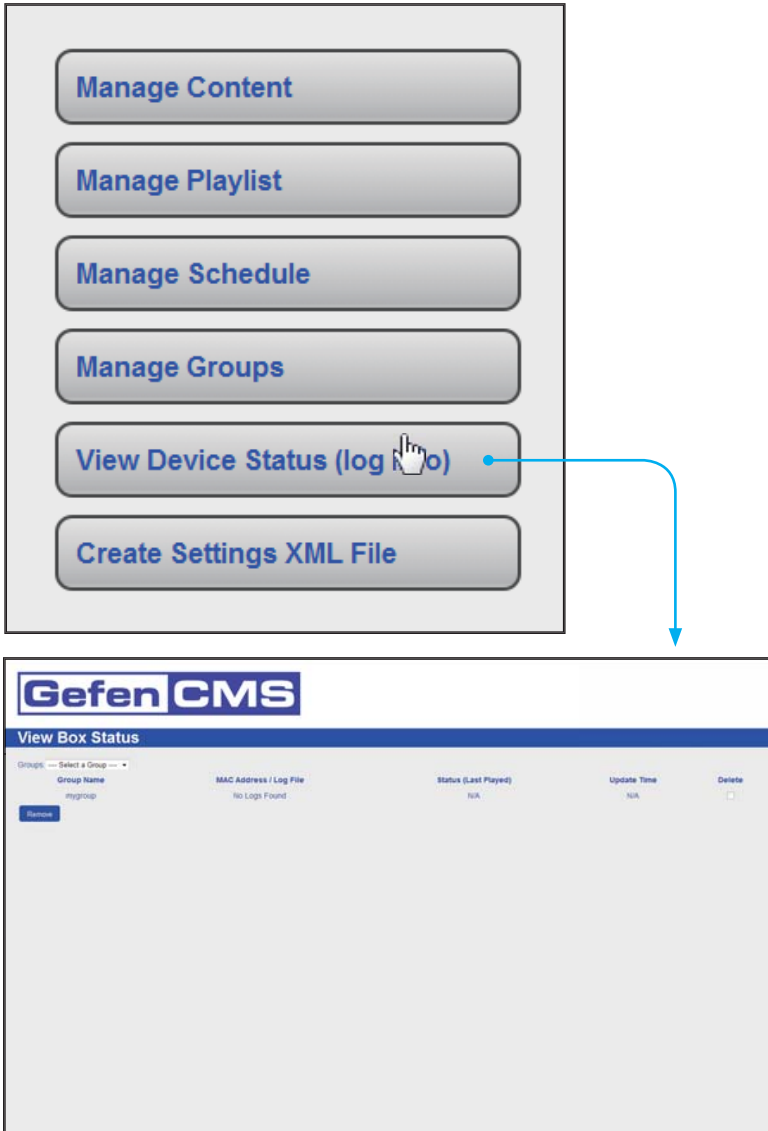

Select Group to Update: ? [Add New](#)

Schedule: ?

Status Reports

Using the View Box Status page allows you to view the log files which are generated by the Hi-Def Digital Signage Media Player.

1. Click on the *View Device Status (log info)* button to display the *View Box Status* page.

After a log file is selected from the Groups pull-down list, the following information is listed in a column under the View Box Status header.

In order to view a log file, you may be required to enter your user name and password. To view the log file, click on the link. You can also right-click and select "Save As..." to save the log file to your computer.

NOTE: In order to access a log file from the server, the default login is ftp and the password is pass. The default login info can be changed but is beyond the scope of this manual. If you require support on changing the default login, contact VMWare.

ID Columns

All log file information is separated into five (5) different columns displayed under the View Box Status header: Group Name, MAC Address / Log File, Status (Last Played), Update Time, and Delete (status).

Remove

Deletes the currently selected log file

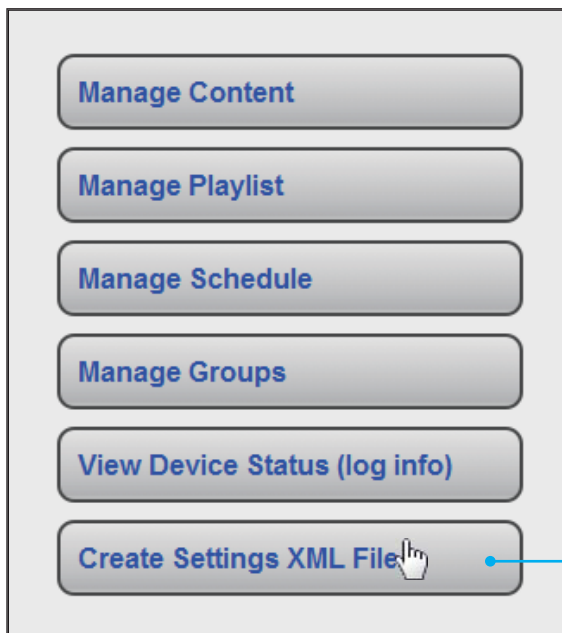

Groups

Click the arrow on the pull-down list box to select the log file to be viewed.

Creating the Settings XML File

Using the View Box Status page allows you to view the log files which are generated by the Hi-Def Digital Signage Media Player.

1. Click on the *Create Settings XML File* button to display the *Create Settings* page.

The screenshot shows the 'Gefen CMS' interface. At the top is a blue header with the 'Gefen CMS' logo. Below the header is a blue bar with the text 'Gefen Create Settings Page'. Underneath is a button labeled 'Create New Settings file (XML)'. The main area contains several settings sections, each with a dropdown arrow: 'Device Name', 'IP Config', 'OSD Lock', 'Network Config', 'Time Settings', 'Daylight Savings', 'Time Mode', 'NTP Server 1', 'NTP Server 2', 'Flash Settings', 'Audio Settings', and 'Full Settings'. The 'Full Settings' section is expanded, showing various configuration options like 'Full Mode', 'Group', 'Full URL', 'Username', 'Password', 'Port', 'Sync Media', 'Sync Playlist', 'Sync Schedule', 'Full Request', 'Start Time', 'Set Active Schedule', 'Group', 'Video Feature', and a 'Save As File' button at the bottom.

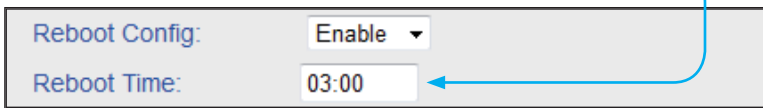

2. Click the *Create Settings XML File* button to create the settings.xml file. The settings.xml file contains all information required by the Hi-Def Digital Signage Media Player to function correctly.
3. Create a name for the Hi-Def Digital Signage Media Player device and type it in the *Device Name* field. In the example below, the Device Name is set to `my_first_device`.

The image shows two screenshots from the Gefen CMS interface. The top screenshot is a modal dialog box titled "Create New Settings file (XML):". It contains four configuration fields: "Device Name:" with the value "my_first_device", "IP Config:" with a dropdown menu set to "Automatic", "OSD Lock:" with a dropdown menu set to "Disable", and "Reboot Config:" with a dropdown menu set to "Disable". A blue arrow points from the "Create New Settings file (XML)" button in the dialog box to the same button on the main "Gefen Create Settings Page" shown in the bottom screenshot. The main page has a blue header with the "Gefen CMS" logo and a sub-header "Gefen Create Settings Page". Below the header, there is a "Create New Settings file (XML)" button and a list of configuration sections: "Device Name", "IP Config", "OSD Lock", "Reboot Config", "Time Settings", "Push Settings", "Full Settings", "Group", "Full URL", "Username", "Password", "Port", "Sync Media", "Sync Playlist", "Sync Schedule", "Full Repeat", "Start Time", "Self Active Schedule", "Display", and "Video Redundancy". Each section has a corresponding dropdown menu or input field.

4. Select the IP Configuration from the IP Config drop-down list. For DHCP configuration, select *Automatic*. If you have a user-assigned IP address for the Media Player, select *Manual*.

- For the *OSD Lock* field, select *Disable* or *Enable*. If no password is required to access the OSD, then select *Disable*. Otherwise, select *Enable*. Refer to the *Hi-Def Digital Signage Media Player User Manual* for information on setting the OSD password.
- Set the *Reboot Config* to *Disable* or *Enable*. This option can be used in rare cases when the Media Player has exhibited abnormal behavior and performing a reboot returns the Media Player to normal operation.

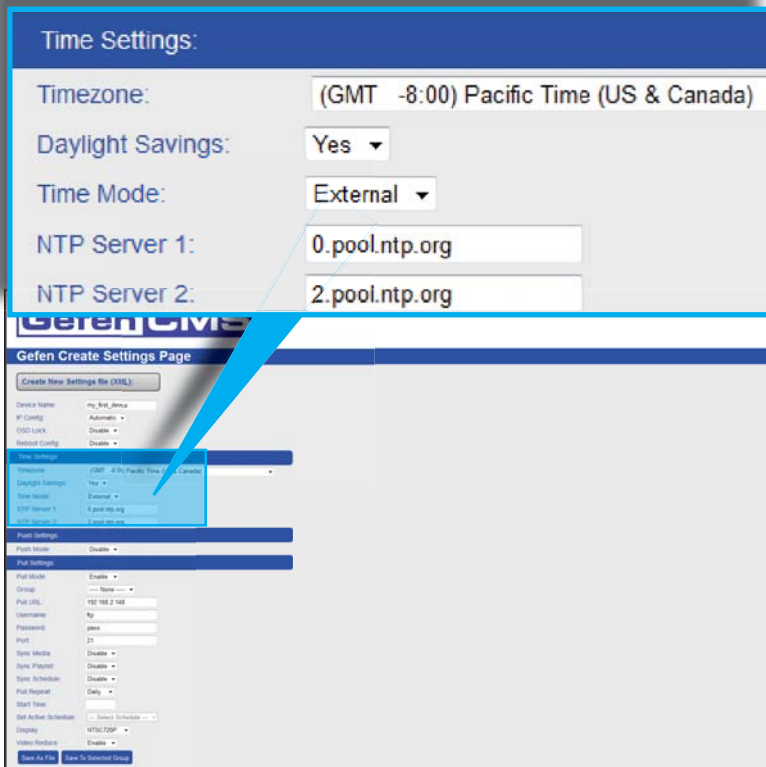

If the *Reboot Config* is set to *Enable*, the *Reboot Time* field will be displayed. It is recommended to set the *Reboot Time*, during a period when content is not scheduled to play. After the reboot procedure has completed, the Media Player will continue with the current schedule.

Reboot Config: Enable

Reboot Time: 03:00

- Select the Time Zone (GMT) from the *Timezone* drop-down list.

Time Settings:

Timezone: (GMT -8:00) Pacific Time (US & Canada)

Daylight Savings: Yes

Time Mode: External

8. Select Yes or No from the *Daylight Saving* drop-down list.
9. Set the *Time Mode* by selecting either *External* or *Internal* from the drop-down list. When using schedules, it is highly recommended that an NTP server be used to maintain all time settings. Refer to the *Hi-Def Digital Signage Media Player User Manual* for more information.
10. Provide the NTP server address(s) if using the *External Time Mode* setting.
11. If you are using Push Mode, set the *Push Mode* drop-down list to *Enable*. Push Mode describes a process whereby content is (manually) "pushed to" the Hi-Def Digital Signage Media Player using an FTP client. In this configuration, the Hi-Def Digital Signage Media Player becomes the FTP server. Refer to the *Hi-Def Digital Signage Media Player User Manual* for more information on this feature.

12. Set *Pull Mode* to *Enable* or *Disable*. When we refer to *Pull Mode*, we are describing a process whereby content is (automatically) “pulled from” an FTP server to the Hi-Def Digital Signage Media Player. In this configuration, the Hi-Def Digital Signage Media Player becomes the FTP client. The CMS is designed specifically for managing multiple units on a network. Refer to the *Hi-Def Digital Signage Media Player User Manual* for more information on this feature.
13. Use the pull-down list to select the Group that this `settings.xml` file will be associated with. In the example below, the `mygroup` Group has been selected.

The screenshot displays the CMS settings interface, divided into two main sections: Push Settings and Pull Settings. The Push Settings section includes a 'Push Mode' dropdown set to 'Disable'. The Pull Settings section includes a 'Pull Mode' dropdown set to 'Enable', a 'Group' dropdown set to 'mygroup' (highlighted by a blue arrow), a 'Pull URL' text field containing '192.168.2.148', a 'Username' text field containing 'ftp', a 'Password' text field containing 'pass', a 'Port' text field containing '21', and several other dropdowns for 'Sync Media' (Disable), 'Sync Playlist' (Disable), 'Sync Schedule' (Disable), 'Pull Repeat' (Daily), 'Start Time' (empty), 'Set Active Schedule' (myschedule.gsh), 'Display' (NTSC720P), and 'Video Reduce' (Enable). At the bottom, there are two buttons: 'Save As File' and 'Save To Selected Group'.

15. Enabling Sync Media will instruct the Hi-Def Digital Signage Media Player to receive new content while erasing current content. Disabling Sync Media will instruct the Hi-Def Digital Signage Media Player to receive new content without deleting the current content. One advantage of enabling Sync Media is that it will reduce the space requirement for media content on the USB drive. Refer to the *Hi-Def Digital Signage Media Player User Manual* for more information on this feature.

16. Sync Playlist and Sync Schedule function in the same way as Sync Media. If either of these settings are enabled, then the new schedule file and/or playlist file will be updated from the server to the Media Player. The current schedule file and playlist(s) will be replaced with the new files. Refer to the *Hi-Def Digital Signage Media Player User Manual* for more information on these features.
17. Set the Pull Repeat value to specify when the Hi-Def Digital Signage Media Player will pull content from the server. If you want to only pull content on a daily basis, then set the Pull Repeat value to `Daily`. Conversely, if you want to pull content on an hourly basis, then set the Pull Repeat value to `Hourly`. Pull Mode can be disabled by setting the Pull Repeat value to `Never`.
18. Set the Start Time. The maximum value for the Pull Repeat Start Time is 23:59. Refer to the *Hi-Def Digital Signage Media Player User Manual* for more information on this feature.
19. The Set Active Schedule pull-down list. If only one schedule file is present, then this field will automatically be assigned once the group is selected (see Step 11).
20. Select the output resolution using the Display pull-down list. Refer to the *Hi-Def Digital Signage Media Player User Manual* for more details on available output resolutions.
21. The Video Reduce option enables or disables the underscan mode.
22. Save the `settings.xml` file to the USB drive (or external storage) by clicking the *Save As File* button. After the XML file is saved to the USB device, connect the USB device to the Media Player. Once the Media Player is powered, the `settings.xml` file will be processed by the Media Player and the associated playlist and schedule files will be executed. Refer to the *Hi-Def Digital Signage Media Player User Manual* for detailed information on file nomenclature and functionality.
23. When editing an existing `settings.xml` file, use the *Save To Selected Group* button. The file is being saved to the server. Since the Media Player is in Pull Mode, the changes in the `settings.xml` file will be applied after the next Pull event.
